

## **additional Figures to the paper**

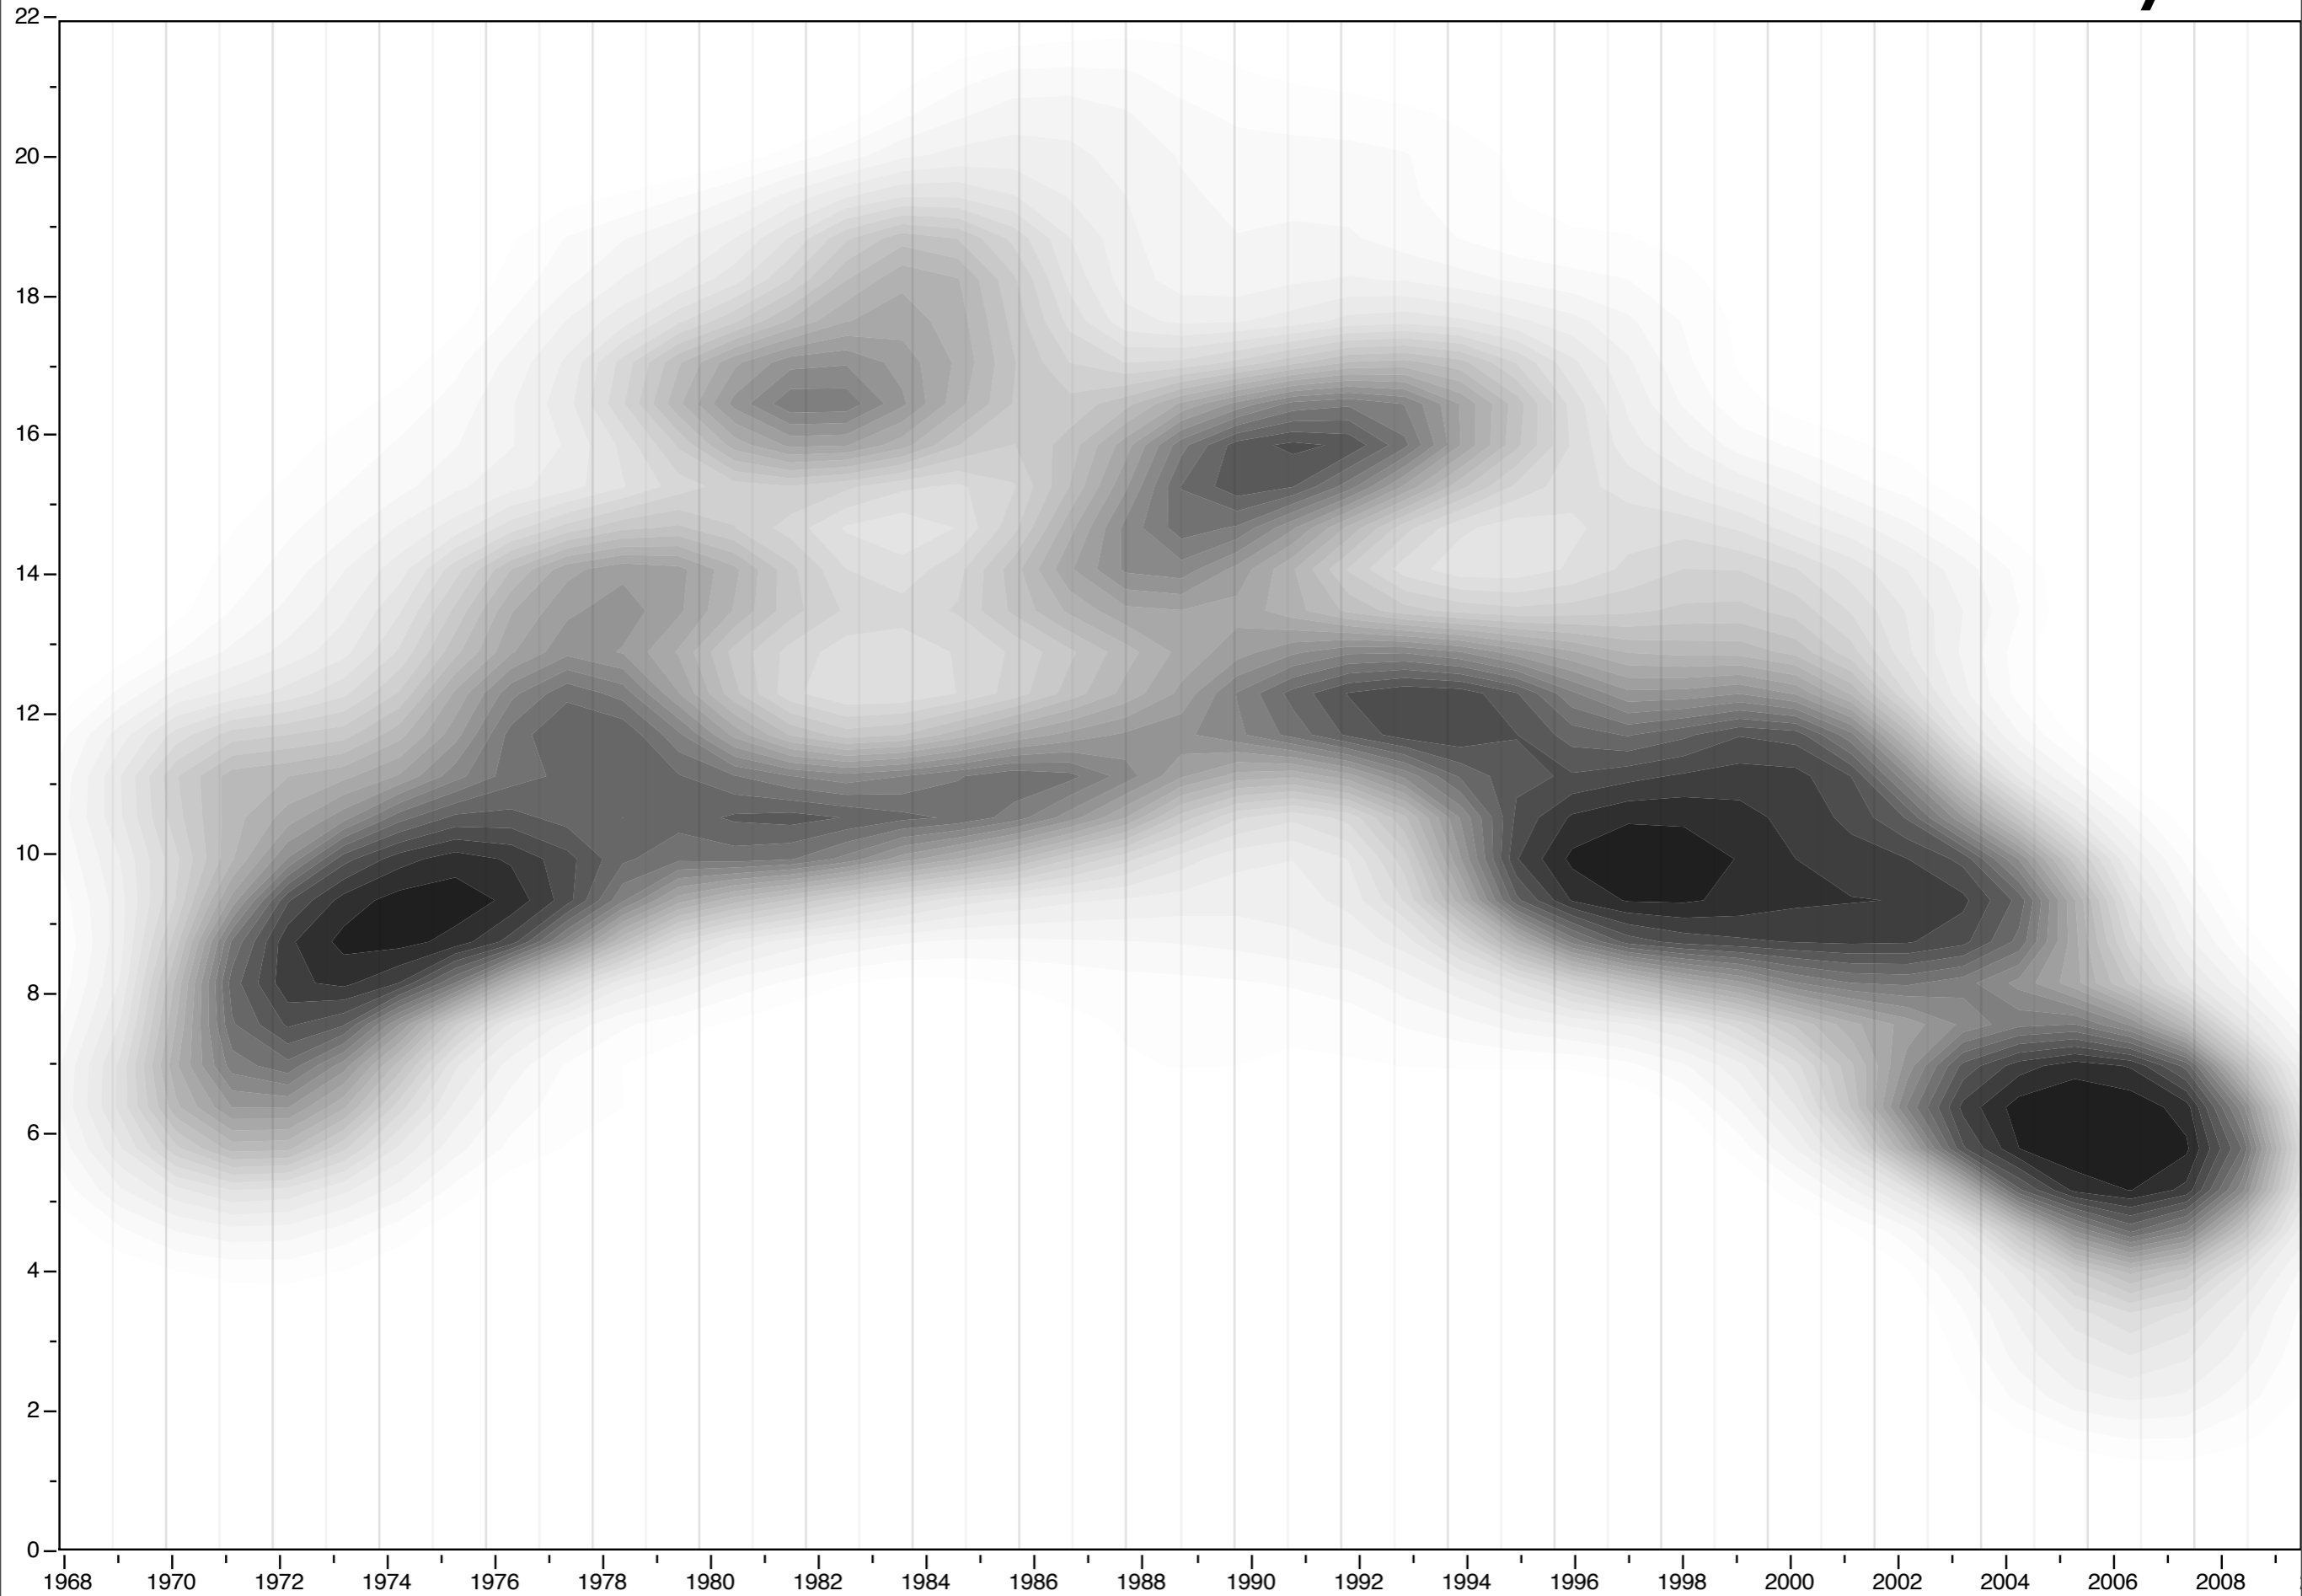

**Reisch T, Steffen T, Habenstein A, & Tschacher W (2013). Firearm restriction: Change of suicide rates in Switzerland before and after the army reform (Army XXI). American Journal of Psychiatry, 170, 977-984. doi:10.1176/appi.ajp.2013.12091256**

next page: Contour plot of time series of monthly numbers of firearm suicides in Switzerland. Data are for the cohort of men ages 18-43, in years between 1969 and 2008. The 'cloud' on the rightmost side corroborates the finding of the paper that the nationwide intervention to restrict firearms was ensued by reduced firearm suicide rates in the years 2004-2008, i.e. after the intervention.

last page: Contour plot with time series plot of actual data

W. Tschacher

# firearm suicide numbers in Switzerland, male 18-43 y.

# firearm suicide numbers in Switzerland, male 18-43 y.
